

## SANDHAM ENGINEERING LTD

Energy — Efficiency Optimization

### W. Paul Sandham, P. Eng.

Paul has over 27 years experience with rotating equipment. With his Mechanical Engineering background, he has worked in the pump and fan industry, both Industrial and Automotive in design, testing, service and sales. Currently, his efforts are focused on the analysis of centrifugal pumps to save electrical energy for numerous customers as a part of the Ontario Hydro Energy Programs. Energy savings have been obtained through modification, resizing, selection, and matching pumps to their process for many industrial customers.

- Primary Steel
- Automotive
- Pulp & Paper
- Pipeline
- Food & Beverage
- General Manufacturing

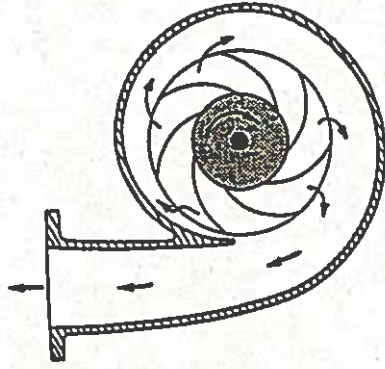

Sandham Engineering Ltd is dedicated to excellence in saving electrical energy and working for your success by:

- Serving you promptly and efficiently.
- Applying practical solutions to save electrical energy.
- Suggesting changes that will protect the integrity of your manufacturing processes.
- Being sensitive to your needs to maintain competitiveness for your products.

Working with your people, we perform on site testing, system analysis, and report on the pump electrical savings. Co-ordinating these pump studies with the Ontario Hydro Energy Advisors means you can take full advantage of the incentives offered through their Energy Management Programs.
